Expert in fused fiber components providing innovative products to improve the signal noise ratio in your system

Highly customizable with proprietary packaging and termination for lower noise and easier integration

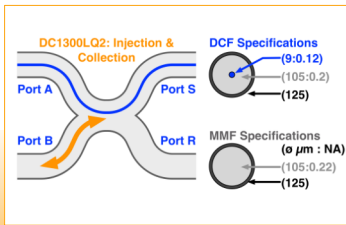

In-house experts to support OEM customers with their system development and product integration for applications such as OCT and LIDAR

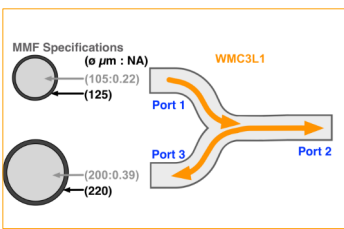

In addition to Castor's exclusive products, couplers such as WDMs and splitters are available for any configuration allowing for a fully customizable optical sub-engine

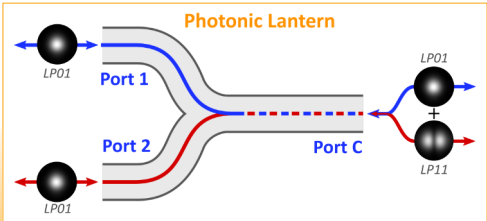

DCFC

Allows for lossless single mode operation such as OCT and LIDAR plus the collection or illumination through a multimode core for higher efficiency

WMC

Allows for efficient and robust multimode illumination and collection through a single probe for very sensitive application such as fluorescence imaging, reflectance spectroscopy or optogenetics

Lantern

Allows for selective de/multiplexing of LP modes with low losses in a compact packaging
